Ensure compliance

Keep people safe

Gallagher's industry-leading integrated security solutions provide complete site control from one central management platform to keep your people safe, ensure the safety of the public, and much more.
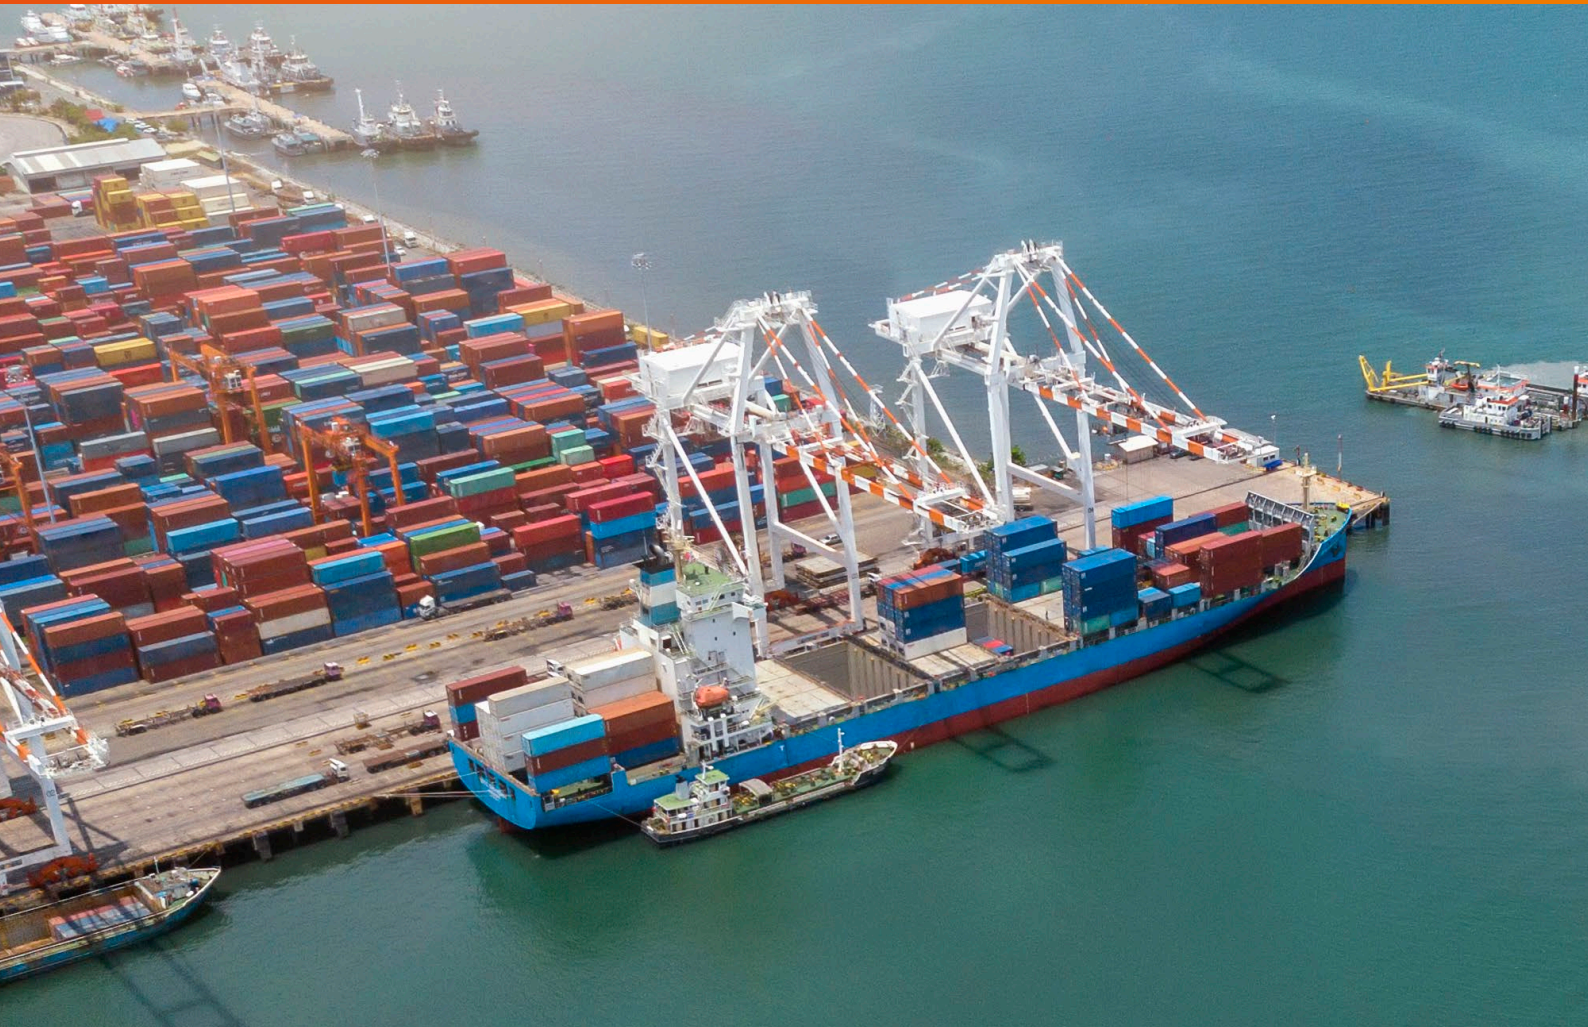

Secure site access

Ensure people only have access to areas they are qualified to be in, and effectively manage compliance with your organizational policies and government regulations.

- Unobtrusive security systems create a secure yet welcoming public airport, port, train, bus station. Channel people through specific access points and deter or protect them from areas that they shouldn't be in.
- In a legislation-driven environment where there are a number of aviation mandates and rules, control and monitor all access to restricted landside and airside areas with intelligent access control.
- Protect staff with a robust perimeter security system by keeping thieves and vandals off site.

Rapid evacuation and lockdown

Gallagher Command Centre helps you respond swiftly and accurately during emergency situations such as fire, natural disaster, terrorism or active shooter threats.

- Secure site quickly and simply with the push of a button to notify staff, contractors, and visitors when an incident occurs.
- Identify, locate and respond to potential risks and unauthorized intrusions in a timely manner, even on disparate sites in remote locations.
- Notify people of changing threat levels using building intercom systems and Broadcast Notifications to mobile phones and email. Send instructions and updates to staff, with different messages based on where they are on site.

> *We believe we have a security system that has not only met our growth needs to date, but is going to continue to meet our needs in the future.*
>
> —— Mike Letica – Manager of Security at the Port of Tauranga

Protect assets and data

Ensure operational continuity and avoid significant costs associated with loss of supply by protecting your site's assets from theft and damage.

Reduce cyber risk

At Gallagher, our solutions are designed from inception to be as cyber secure as possible. We continuously evolve our solutions to meet the changing threat at a software and physical level, building in robust cyber security at every stage.

- Reduce cyber security risks through Gallagher's end-to-end encryption and user authentication.
- Identify potential vulnerabilities within your system using Gallagher's Security Health Check, allowing you to proactively manage and respond to new and evolving security risks.
- Implement regular software and hardware updates across all devices to stay current with cyber threats and effectively manage obsolescence.
- Receive expert configuration advice to deploy the system in a secure environment, and a Gallagher hardening guide to further strengthen each component.
- Gallagher carries out internal and external penetration testing during development to identify vulnerabilities before updates or new solutions are released.

Protect assets

Gallagher's intelligent access control and perimeter solutions provide management and protection for valuable assets and resources on your site.

- Guarantee goods are kept secure during shipping process and maintain your reputation as a reliable transportation provider.
- Avoid significant costs associated with business interruption through security breaches, theft and vandalism e.g. graffiti on buses and trains.
- Supervise access to restricted areas with intelligent alarm monitoring and advanced site map functionality.
- Use zone counting to monitor the number of people in an area on site.

Optimize facility use

Gallagher Command Centre allows you to efficiently manage multiple sites and buildings, each with different requirements, from one centralized system. Gallagher solutions optimize facility use and reduce unnecessary overheads by improving facility management and energy consumption.

Business efficiency and cost savings

Gallagher's integrated security solutions allow you to manage site security, control building management systems, and increase system efficiency – reducing operational and training costs, energy use, and utility costs.
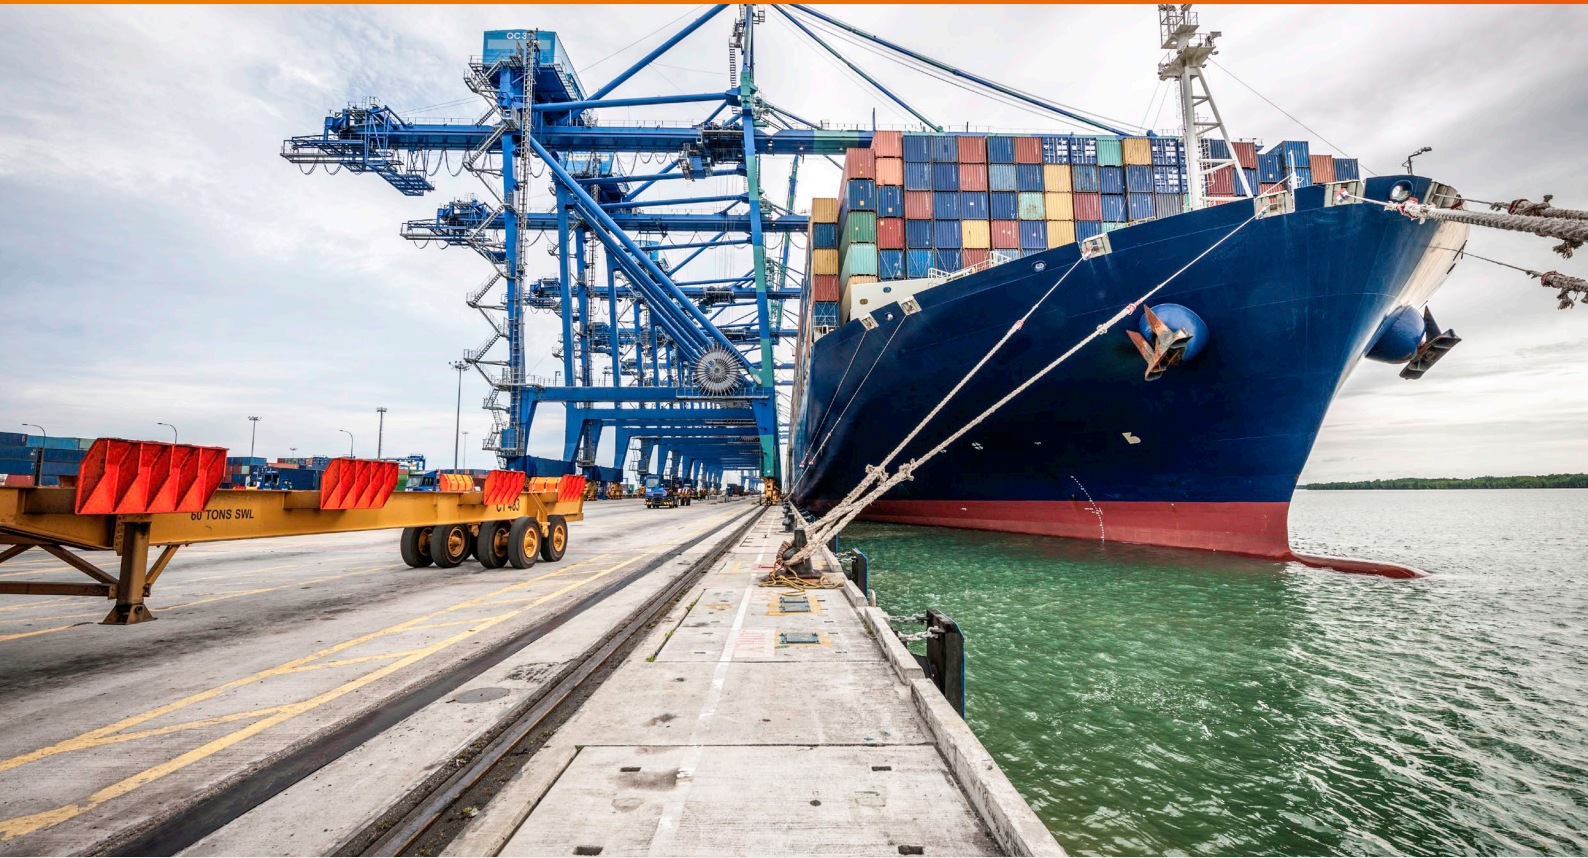

- Total site management with one centralised platform to manage total security on site. Video Management Systems can be integrated with Command centre allowing operators to use a single system for total security.
- In a regularly changing environment, get access to the latest features and enhancements to unlock new business efficiencies.
- Gallagher Command Centre administration platform is easy to use, particularly important for non-technical operators.
- Reduce the need for guard patrols, saving money and minimizing human error.
- Manage carparking for passengers, visitors and staff and ensure carparking is available to the appropriate cardholders.
- Gallagher Locker Management allows a site to manage locker access, automate allocation, and ensure the best utilization of their locker resources all natively from Command Centre.

Future-proof for growth

Implement a comprehensive yet flexible security solution with the ability to easily scale the solution, while remaining centrally managed.

- Highly flexible and scalable solution allows for future growth in passenger numbers, terminal/platform expansions and upgrades on site.
- Gallagher's ability to integrate with human resource management systems makes it easier to manage two systems during a migration process.
- Reduce costs during upgrades with the flexibility to use existing cabling infrastructure.
- Ability to extend to a distributed site featuring multiple terminals and buildings, all with different requirements. Pieces of the site can also be sectioned so that only certain operators can view its events and respond to its alarms.
- Eliminate logistical issues recalling and re-issuing access cards for a new system and maintain security during access card migration.
- Once migration is complete, switch your readers to a more secure mode with a click of a button – no need to go to the individual readers.

Meet compliance and competencies

Implement, enforce, and report on business policies and processes at every point using physical security infrastructure and Command Centre.

Ensure compliance and manage competencies

Access management can be based on individual competencies allowing your business to effectively manage compliance with business policy and government regulations.

- Integrated access control in highly secure areas where HR and SMS data automatically check competencies and enforce compliance with regulations and standards.

- Real-time audit trail provides prompt and reliable decision-making information.

- Use random cardholder selection to check competencies and licensing, as well as drug and alcohol testing.

- Monitor inductions, licenses, training, and qualifications to only allow people access to areas they are sufficiently qualified to be in.

- Ensure customers are up to date with the ever-evolving legislation changes in the transportation industry with regular software updates released twice a year.
