- Mounting arm and camera bracket available in mild steel, stainless steel (#304 or #316), or aluminum*
- Universally customizable for all thermal imaging camera brands and models* (not included)

*Adjust height, reach, face plate, base plate specs, and materials to meet your needs (additional costs and lead times may apply)

Pedestal PRO introduces our customizable Space Needle™ solution, the first mounting kit for thermal imaging cameras that bridges the space between mounting surfaces (walls and ceilings) and your camera's limited range to get that perfect angle and the best data possible!

Whereas traditional camera mounts might limit you to 12" of reach, Pedestal PRO's Space Needle™ solution starts at 14" and is fully customizable to reach out to 10' or more. Dropping down from high ceilings or protruding into the room with a thermal camera mount has never been easier. Furthermore, the Space Needle™ can be made from different materials (mild steel, stainless steel, aluminum) for indoor/outdoor applications and can be polished or color matched to coincide with your lobby or facade's architectural requirements. Lastly, the Space Needle™ has a 360° rotating sphere which will allow you to point the needle any direction—even before you get to panning or tilting with your camera.

For everyone's safety and for the best return on your investment, don't limit yourself to traditional camera mounts when installing thermal imaging cameras. Meet your exact needs with our Space Needle™ solution! Contact a sales engineer at 1-800-660-3072 today for a FREE estimate and FREE customized CAD drawings to specify into your upcoming project.

Your Total Mounting Solution

① Mounting Arm

can be customized to any length, reach, or angle*

② Omni Mount

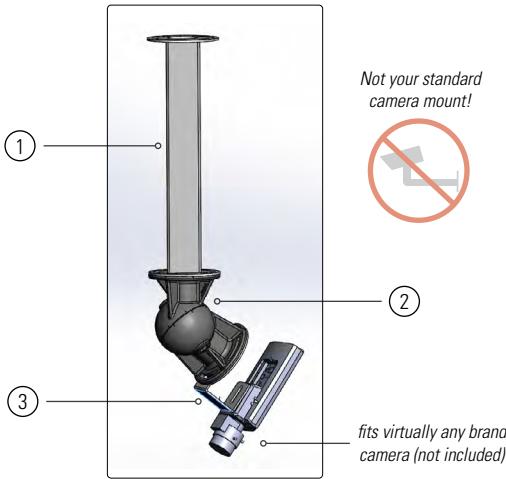

360° x 180° mounting allows for positioning at any angle

③ Camera Mounting Bracket

can be modified to fit your specific camera if needed*
